F-35C Lightning II

Model Kit features

The JSF (Joint Strike Fighter) program was established to develop a new fifth-generation, all-weather, multi-role fighter capable of serving as a viable replacement for ground attack aircraft of the United States and NATO countries. From this project emerged the single-seat Lockheed Martin F-35 Lightning II aircraft. Equipped with extraordinary technology, it is characterized by the adoption of an aerodynamic layout, featuring stealth capabilities and a trapezoidal wing design. Designed to perform missions of air superiority, close air support, and ground attack, its airframe can be configured in various setups. The F-35A operates from conventional runways, the F-35B is designed for vertical take-off and landing, and the F-35C is ideal for deployment from conventional aircraft carriers. More specifically, the F-35C is distinguished by its folding wingtips to optimize onboard storage operations, a rear arrestor hook, and a reinforced frontal gear suitable for catapult launch systems on U.S. Navy aircraft carriers.

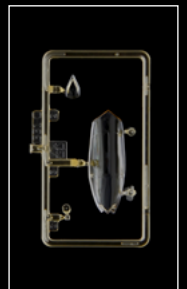

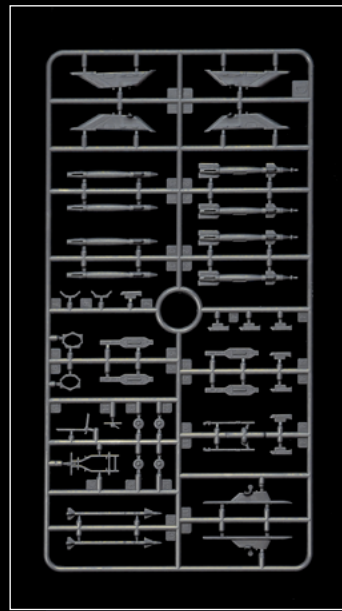

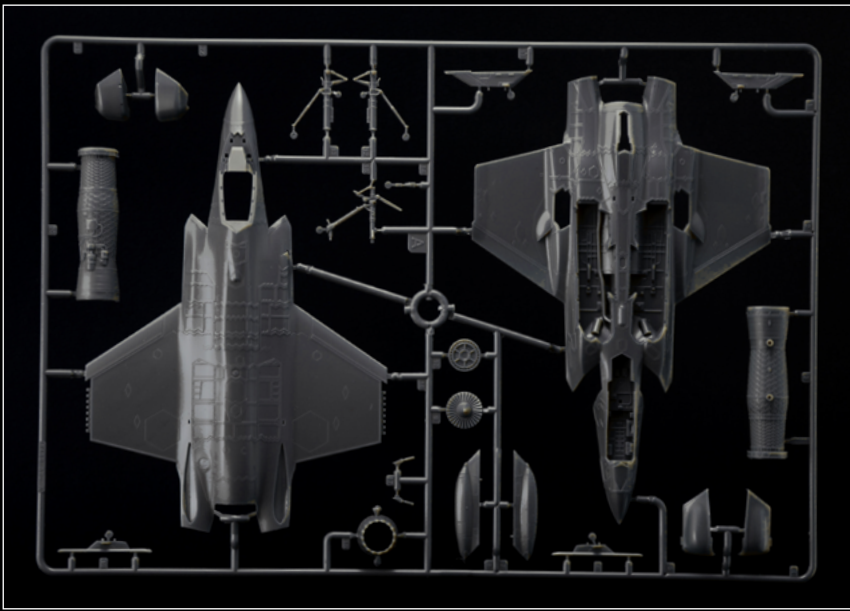

- **Parts for “beast mode” configuration**
- **New masks stickers sheet**
- **Detailed external pylons and weapons**
- **Detailed cockpit and ejection seat**
- **Complete and detailed engine**
- **Fine engraved panels lines**
- **Landing gears, weapons bay and realistic foldable wings accurately reproduced with open or closed assembly option**
- **Super decals sheet for 4 versions**
